3.4A Hint

This problem involves at least two steps to solve. You will need to determine the total number of boxes that have already been sold, as well as how many more boxes need to be sold.

Organize information in a diagram that models the problem:

```
| 198 boxes | 381 boxes | 256 boxes | ? boxes |
```

950 boxes

Estimate using easier numbers: 200 + 400 + 250 = 850

\[850 + ? = 950\]
